**RoHS** **LRBW** Reversible Locating Rings—For bolt type—

**RoHS** **LRSS** For shoulder type

**RoHS** **LRSD** For shoulder type

**RoHS** **LAR** Locating Ring Adapter

**ex** Example

- It can be installed from both sides.
- Outer diameter of locating ring can be selected to suit a molding machine.  
When No.=100・120・130; K=8, H=2  
When No.=100・16・120・16・130・16; K=10, H=4
- Making the locating ring diameter wider by one size without locating ring replacement is possible by installing LAR on the outer side of locating ring.
- A wide range of runner lock pins can be pressed by the head of locating ring.

**EX** Example

Ⓜ Note that when ordering EMSG, there is no need to enter the letter A of the alphabet.

- Oblique gates require angular hole processing that are often difficult by drilling. Electro discharging is suitable for preparing an angular hole in places where the drill tip would not be well aligned or broken.
- The di dimension is dependent on the runner diameter (W). Select the appropriate P dimension in accordance with di.

- Ⓜ The electrode's tip may be bent if it is dropped or its tip directly touches other objects. If so, make sure to perform dressing before using it for rotating discharge process.

**Example** ■ Undersized Tapping Electrodes  
This electrode is used when forming a female thread in hardened steel by electrical discharge machining.

Ⓜ Tip diameter (d) is smaller than the screw size (M).  
Insert an undersized tapping electrode in the low screw hole (low hole diameter reference value **P.1347**), and perform electrical discharge machining while rocking X and Y directions.

- Swing amount =  $M - d - 0.1$  (Target)
- Clearance for electro discharge = on one side 0.1~0.5

## What is copper tungsten?

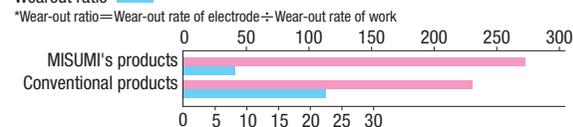

- Characteristics
- The composition and alloy structure are optimally adjusted to extend life of an electrode and to raise efficiency of electrical discharge machining at the same time.
  - It is possible to increase the machining speed, and reduce the wear of the electrode itself. Tungsten is very hard, permitting accurate electrical discharge machining.

## ■ Characteristic values

Material characteristics	Copper tungsten
Gravity	14.0
Hardness (HRB)	93.5
Conductivity (IACS%)	50
Tensile strength (kgf/mm <sup>2</sup> )	60
Transverse rupture strength (kgf/mm <sup>2</sup> )	125

## ■ Comparison of machining data

Work: Carbide V3  
Machining condition: 14~16μm settings  
Machining speed (g/min.) **■**  
Wearout ratio **■**

· Extension method for cavity inserts

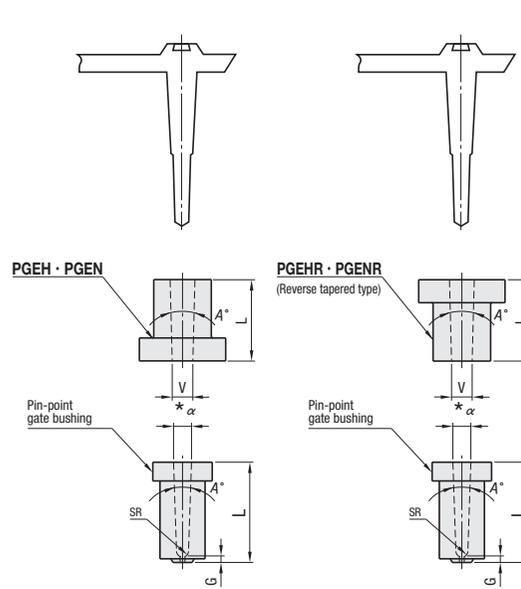

■ PGEHS · PGENS

## How to Select V Dimension

$V \geq \alpha + X$

ⓘ To use this pin gate extension bushing together with a select the appropriate  $\alpha$  dimension from the following formula and designate V dimension.

Calculation for the inlet diameter \*  $\alpha$  of Pin Gate Extension Bushings

$\alpha = 2SR + 2(L-G-SR)\tan\frac{A}{2}$  ⓘ SR the inside diameter ⓘ Tapered the inside diameter

$\alpha = 2(L-G)\tan\frac{A}{2} + G\tan\frac{K}{2} + P$

ⓘ The dimension acquired using the above calculation is the theoretical (reference) value.

**Applicable x dimensions**

M	Type	$\alpha$	Eccentricity between D and V	Pin Gate Extension Bushing	X
SKH51	PGHS PGHST PGHTBL PGHB□A PGHV□A PGHVT□A	PGH□A PGHD□A PGHT□A PGHF□A PGHB□A PGHV□A	±0.1	0.05 or less	0.3
Carbide	PGWB□A PGW□A				
Electro forming	PGES PGEST PGE□A PGE□A PGEV□A	PGE□A PGEK□A PGET□A PGE□A PGE□A	±0.05	0.05 or less	0.3
Electro forming (high hardness)	PGKS PGKST PGK□A PGK□A	PGK□A PGKK□A PGK□A PGK□A			

ⓘ Please examine at the time of designing the mold that the relationship between V and  $\alpha$  will not be undercut when runner is pulled out.

## Calculation for the inlet diameter \* $\beta$ of Pin Gate Extension Bushings
